

Pixelmator Pro 1.2 Quicksilver

Quick Overview

macOS Mojave Support

Pixelmator Pro is now fully optimized for macOS Mojave, with an all-new light appearance, colorful SVG fonts, support for the Continuity Camera, Quick Actions, and faster machine learning tools thanks to Core ML 2.

Core ML 2 Quick Actions SVG Fonts

Light Appearance Continuity Camera

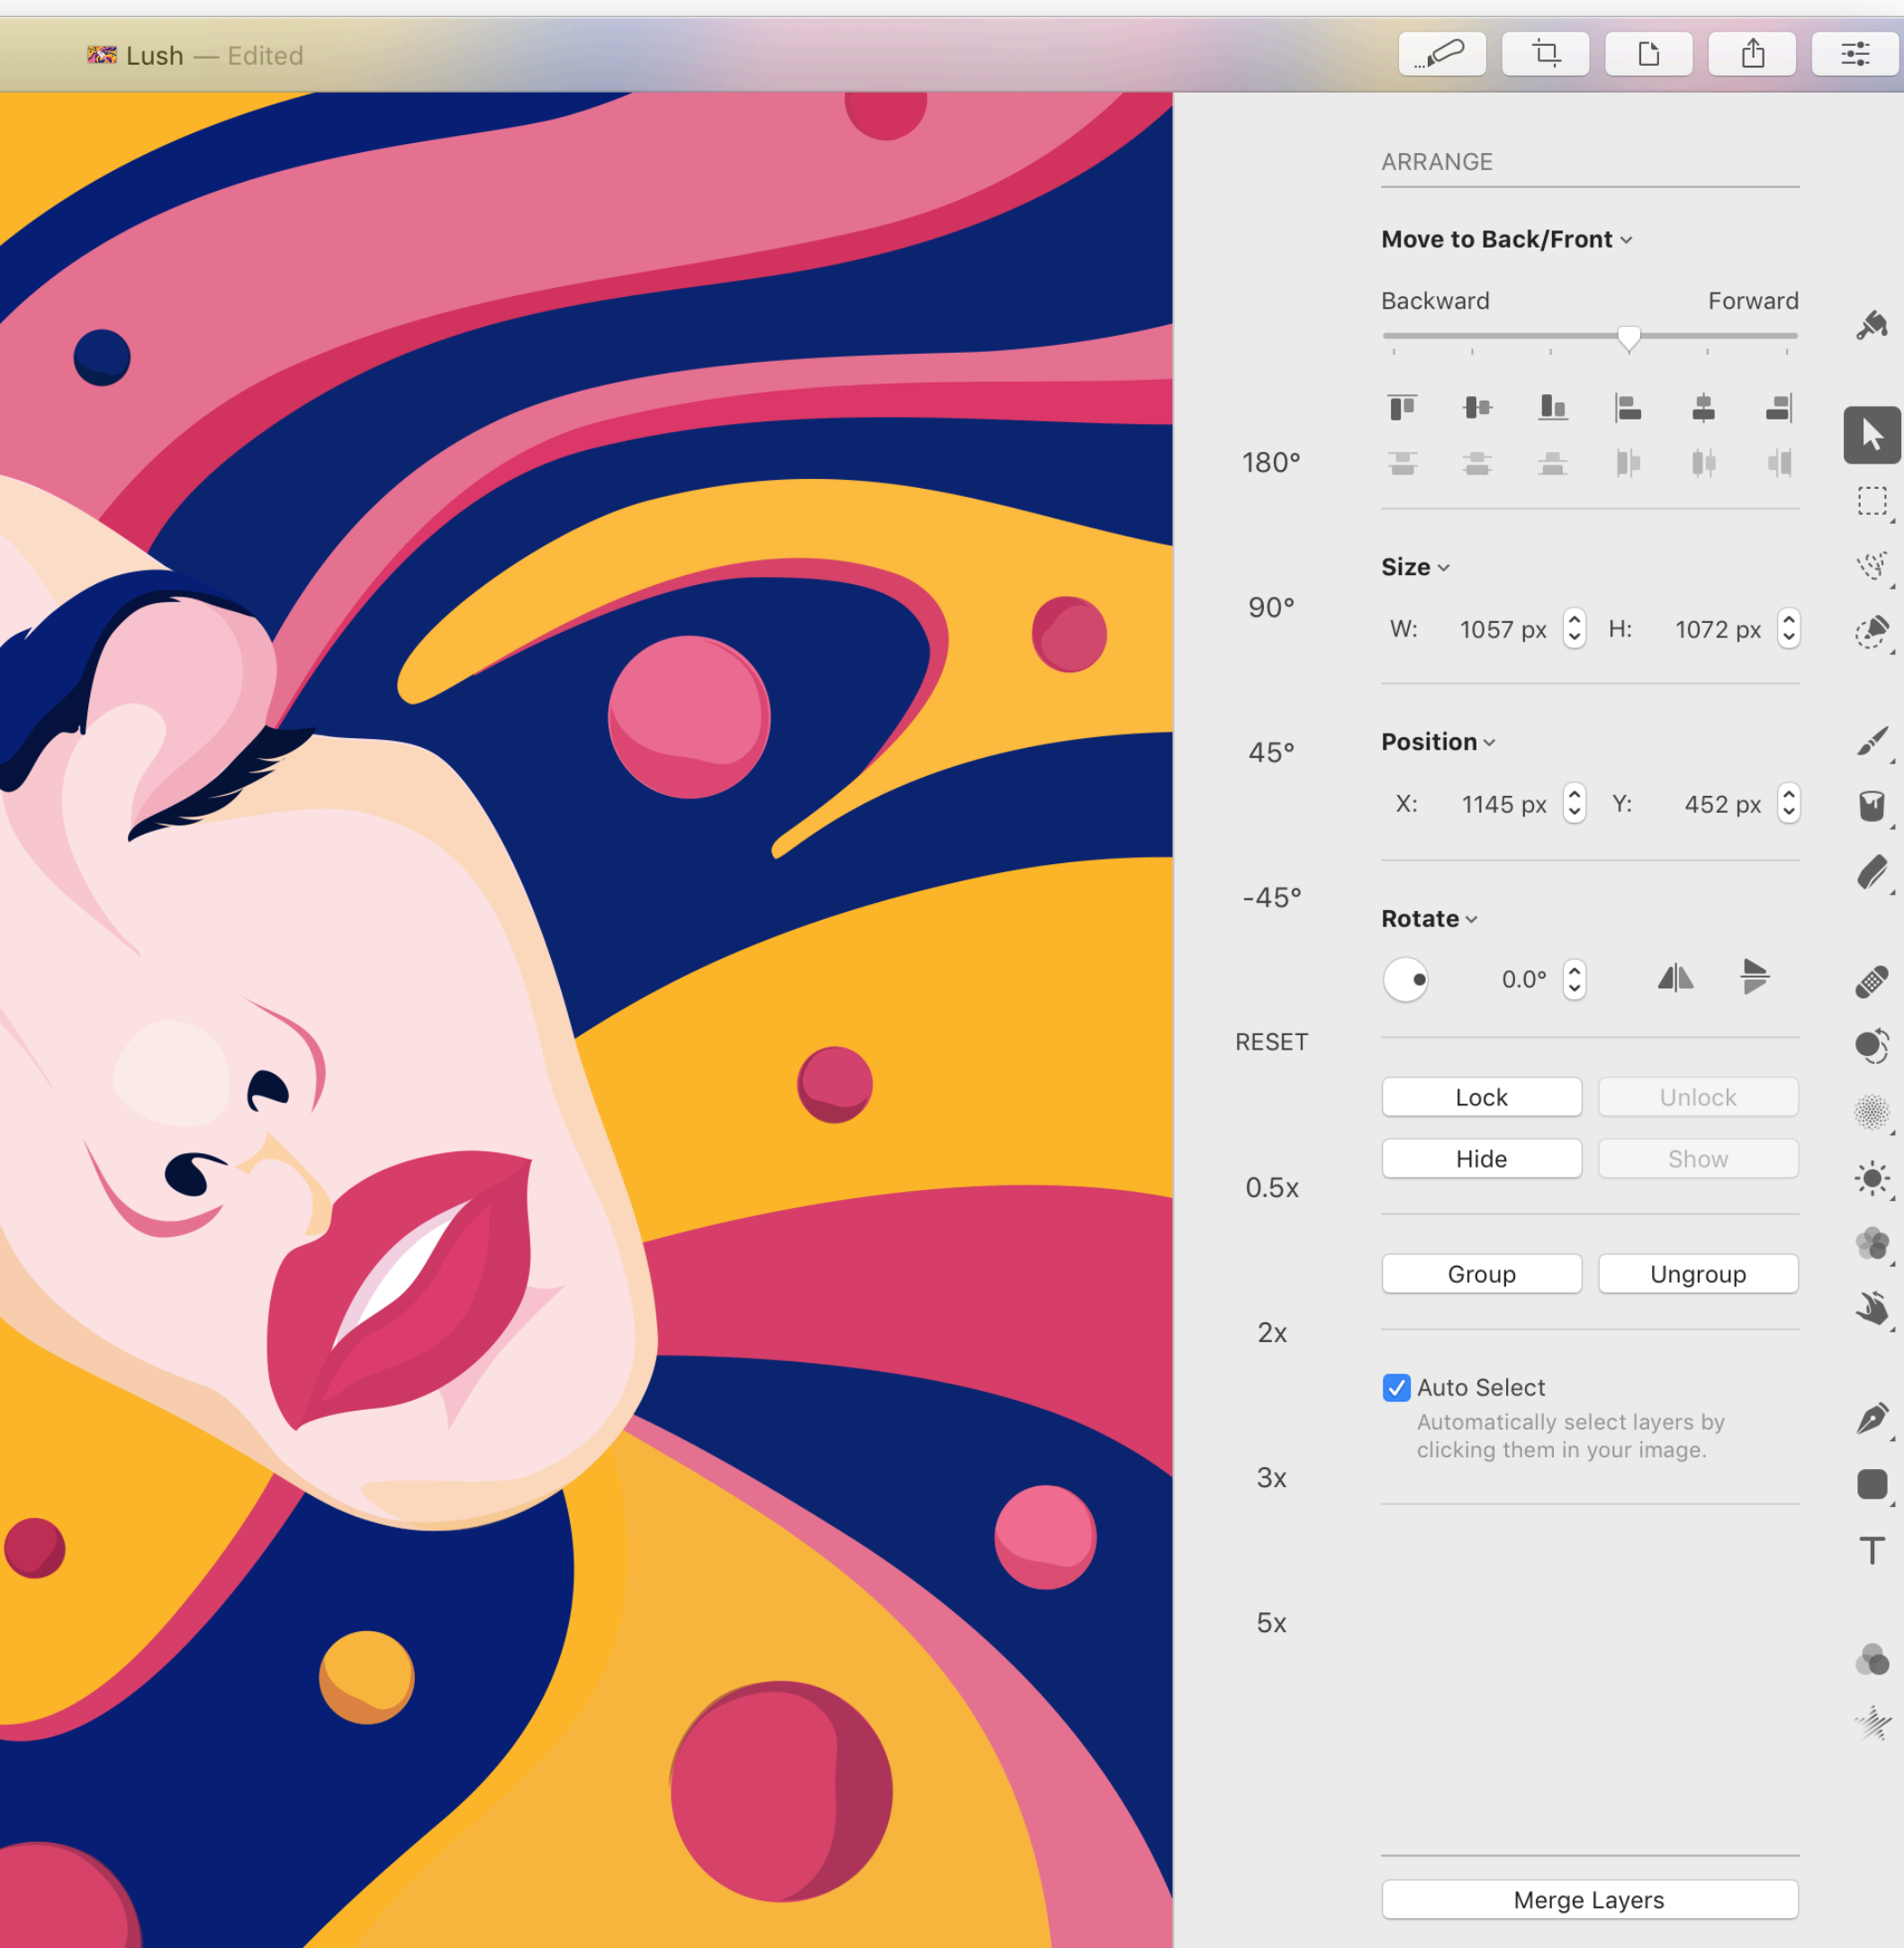

Core ML 2

Core ML 2 now powers Auto Layer Naming and each of the ML Color Adjustments in Pixelmator Pro. It's also used for the new ML Enhance feature, making it possible for a 200-layer-deep neural network to analyze and improve the colors of an image in the blink of an eye. And thanks to batch prediction in Core ML 2, performance now scales with more powerful hardware, delivering faster speeds on more powerful GPUs.

Pixelmator Pro features powered by Core ML 2:

ML Enhance	ML Lightness	ML Hue & Saturation
ML White Balance	ML Colors	Smart Layer Naming

New Interface

With an all-new light appearance and a redesigned dark appearance, Pixelmator Pro fully supports both Light Mode and the new Dark Mode in macOS Mojave, giving you total freedom to choose the workspace that works best for you.

Light Appearance

A brand new, thoughtfully designed light appearance brings the classic Mac app look and feel to Pixelmator Pro and lets you explore its beautiful interface like never before.

Dark Appearance

The dark appearance has also been redesigned from the ground up to be perfect for Dark Mode, making Pixelmator Pro feel right at home on macOS Mojave.

ML Enhance

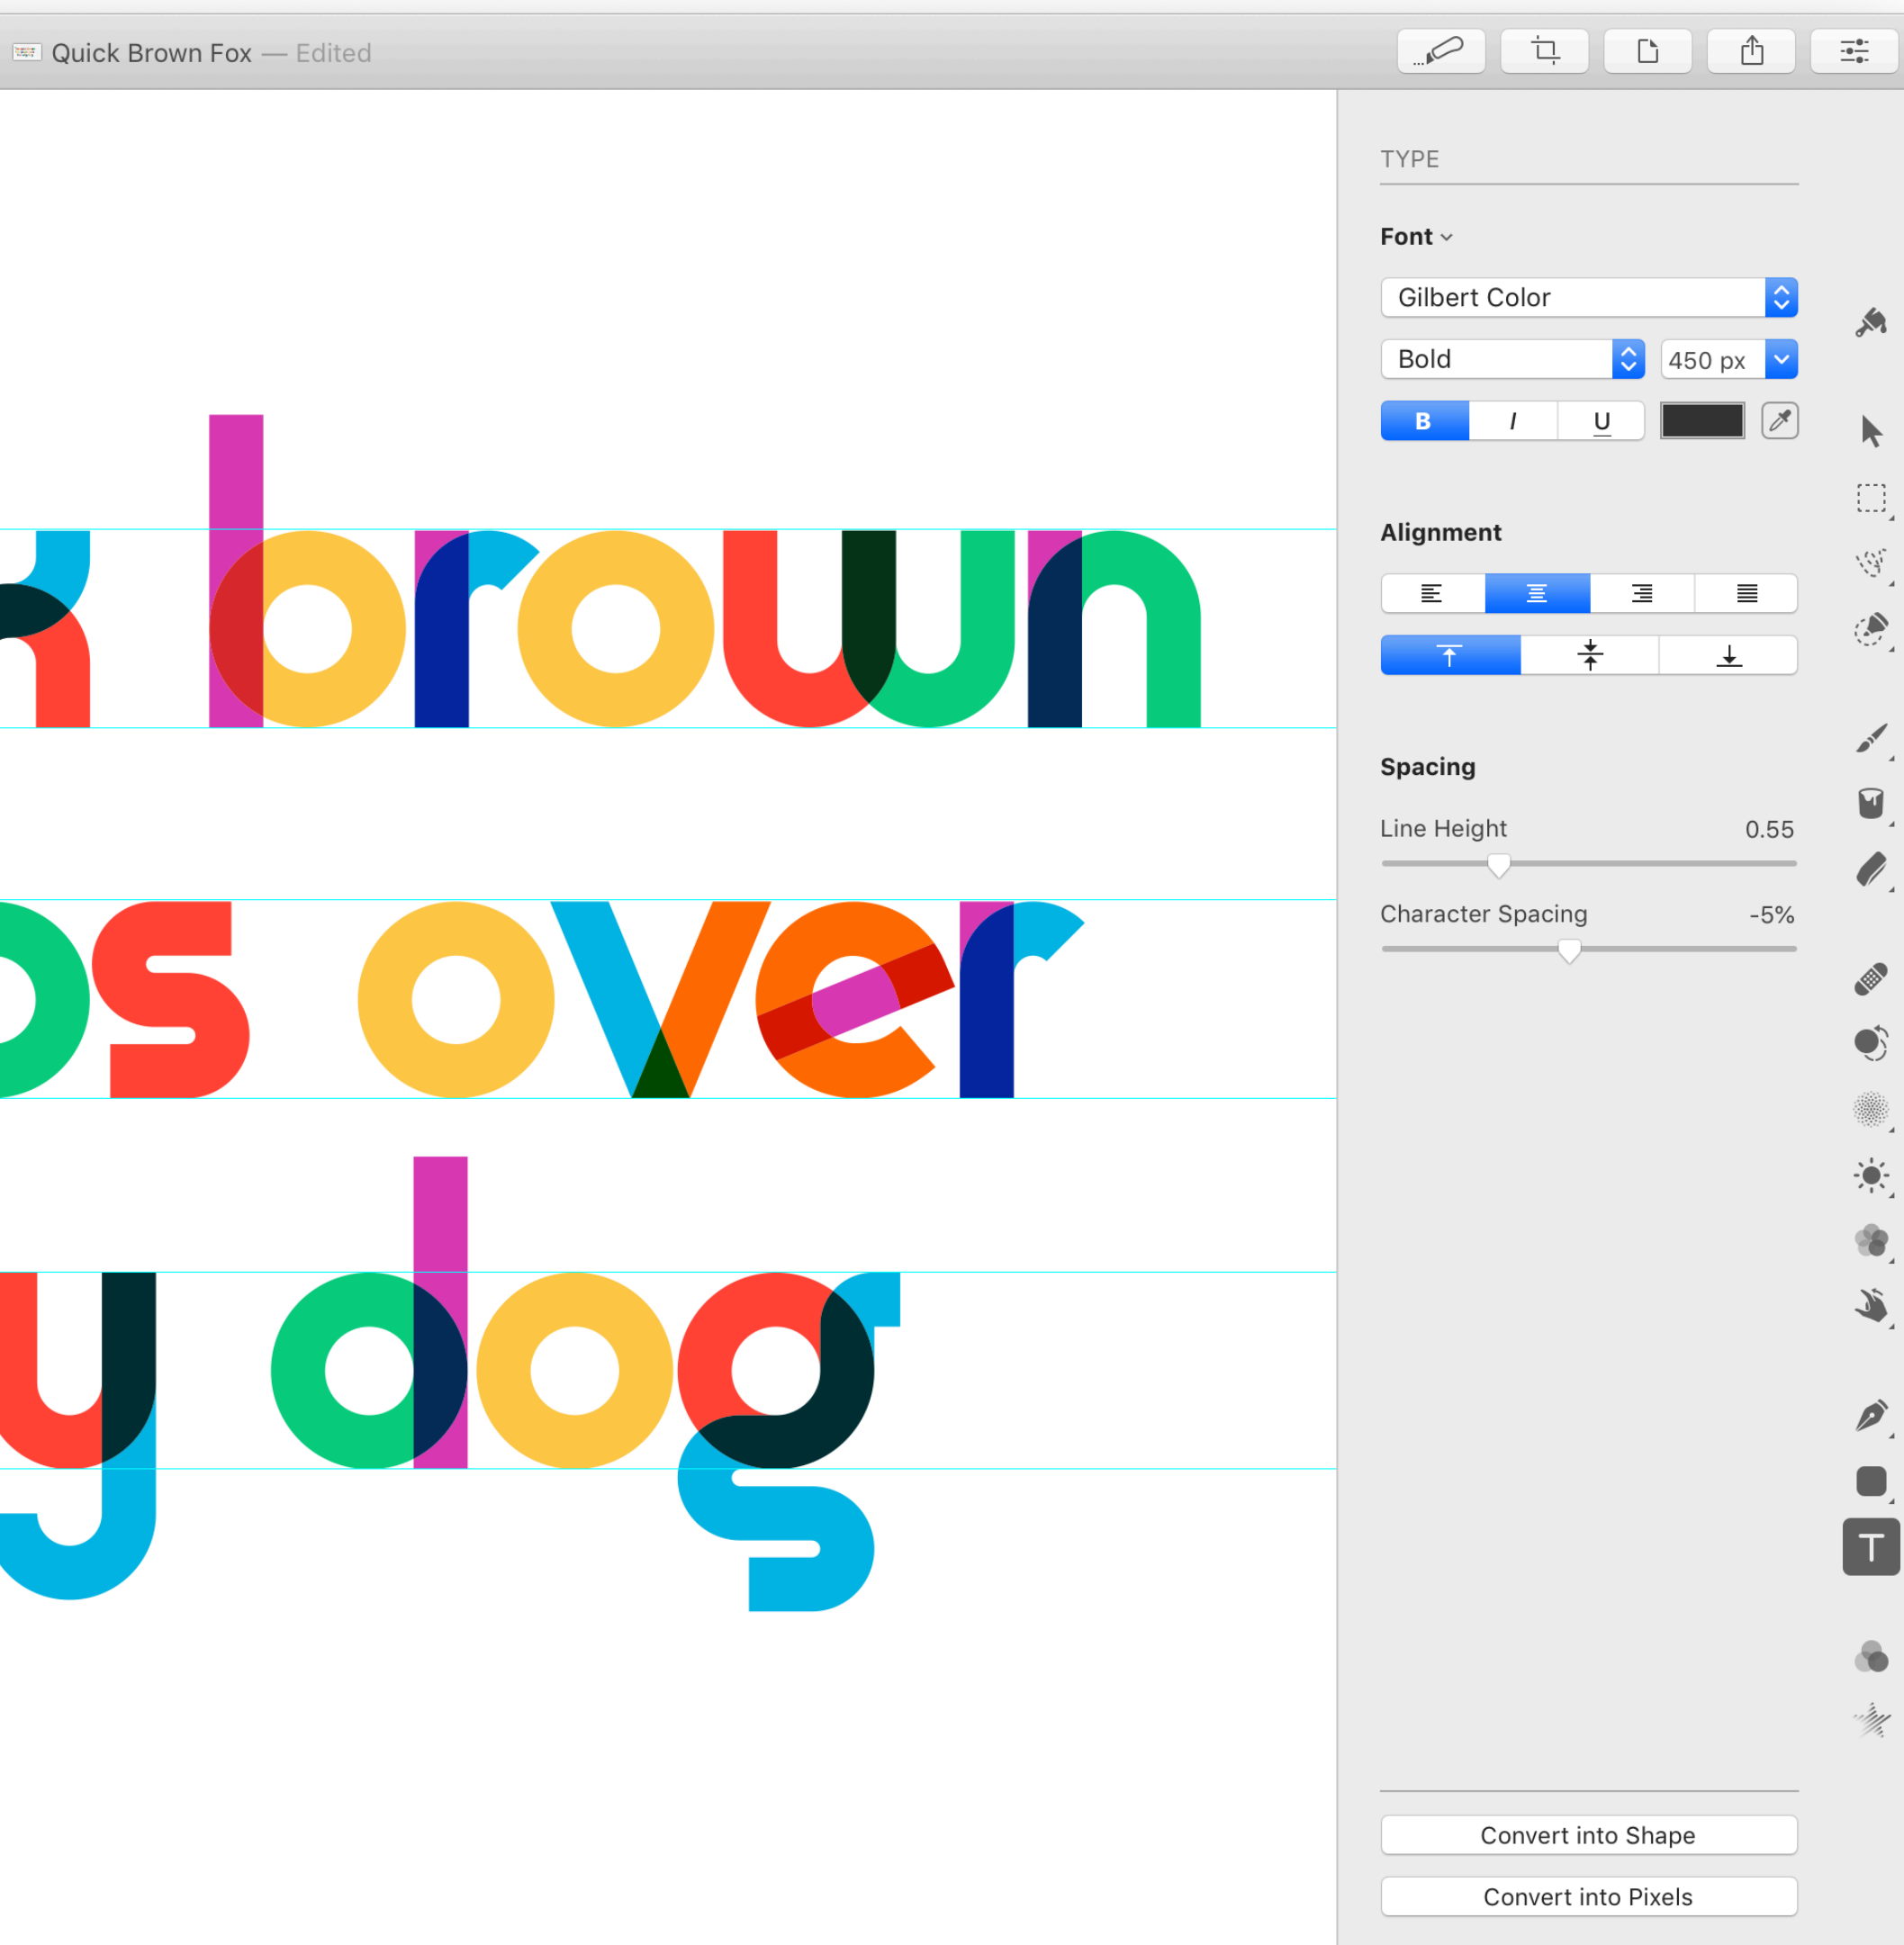

Effortlessly bring out the best in all your photos with the new, Core ML 2-powered ML Enhance. Trained on 20 million professional photos, ML Enhance intelligently fine-tunes 37 individual color adjustments to give you the best starting point for making your own creative edits to a photo.

37 Adjustments

Auto Enhance automatically fine-tunes 37 different color adjustment sliders, including exposure, contrast, white balance, and even individual color ranges, to make your images stand out.

Core ML 2

Powered by a 200-layer-deep neural network trained on millions of image pairs, the machine learning model is integrated via Core ML 2, delivering blazing fast performance.

SVG Fonts

SVG fonts bring a whole new way to type text in Pixelmator Pro. These fonts can be composed of multiple colors, shades, textures, and can even include transparency. So now you can create even richer and more vibrant graphics and designs more easily than ever.

Continuity Camera

With support for the Continuity Camera, you can now take a picture using your iPhone and have it instantly appear in the Pixelmator Pro document you're editing.

Batch Processing

Batch process images using five powerful Pixelmator Pro actions for the Automator app.

Auto White Balance Images

Automatically correct the white balance of images.

Auto Enhance Images

Automatically make photos look their best using the Core ML 2-powered Auto Enhance action.

Apply Color Adjustments to Images

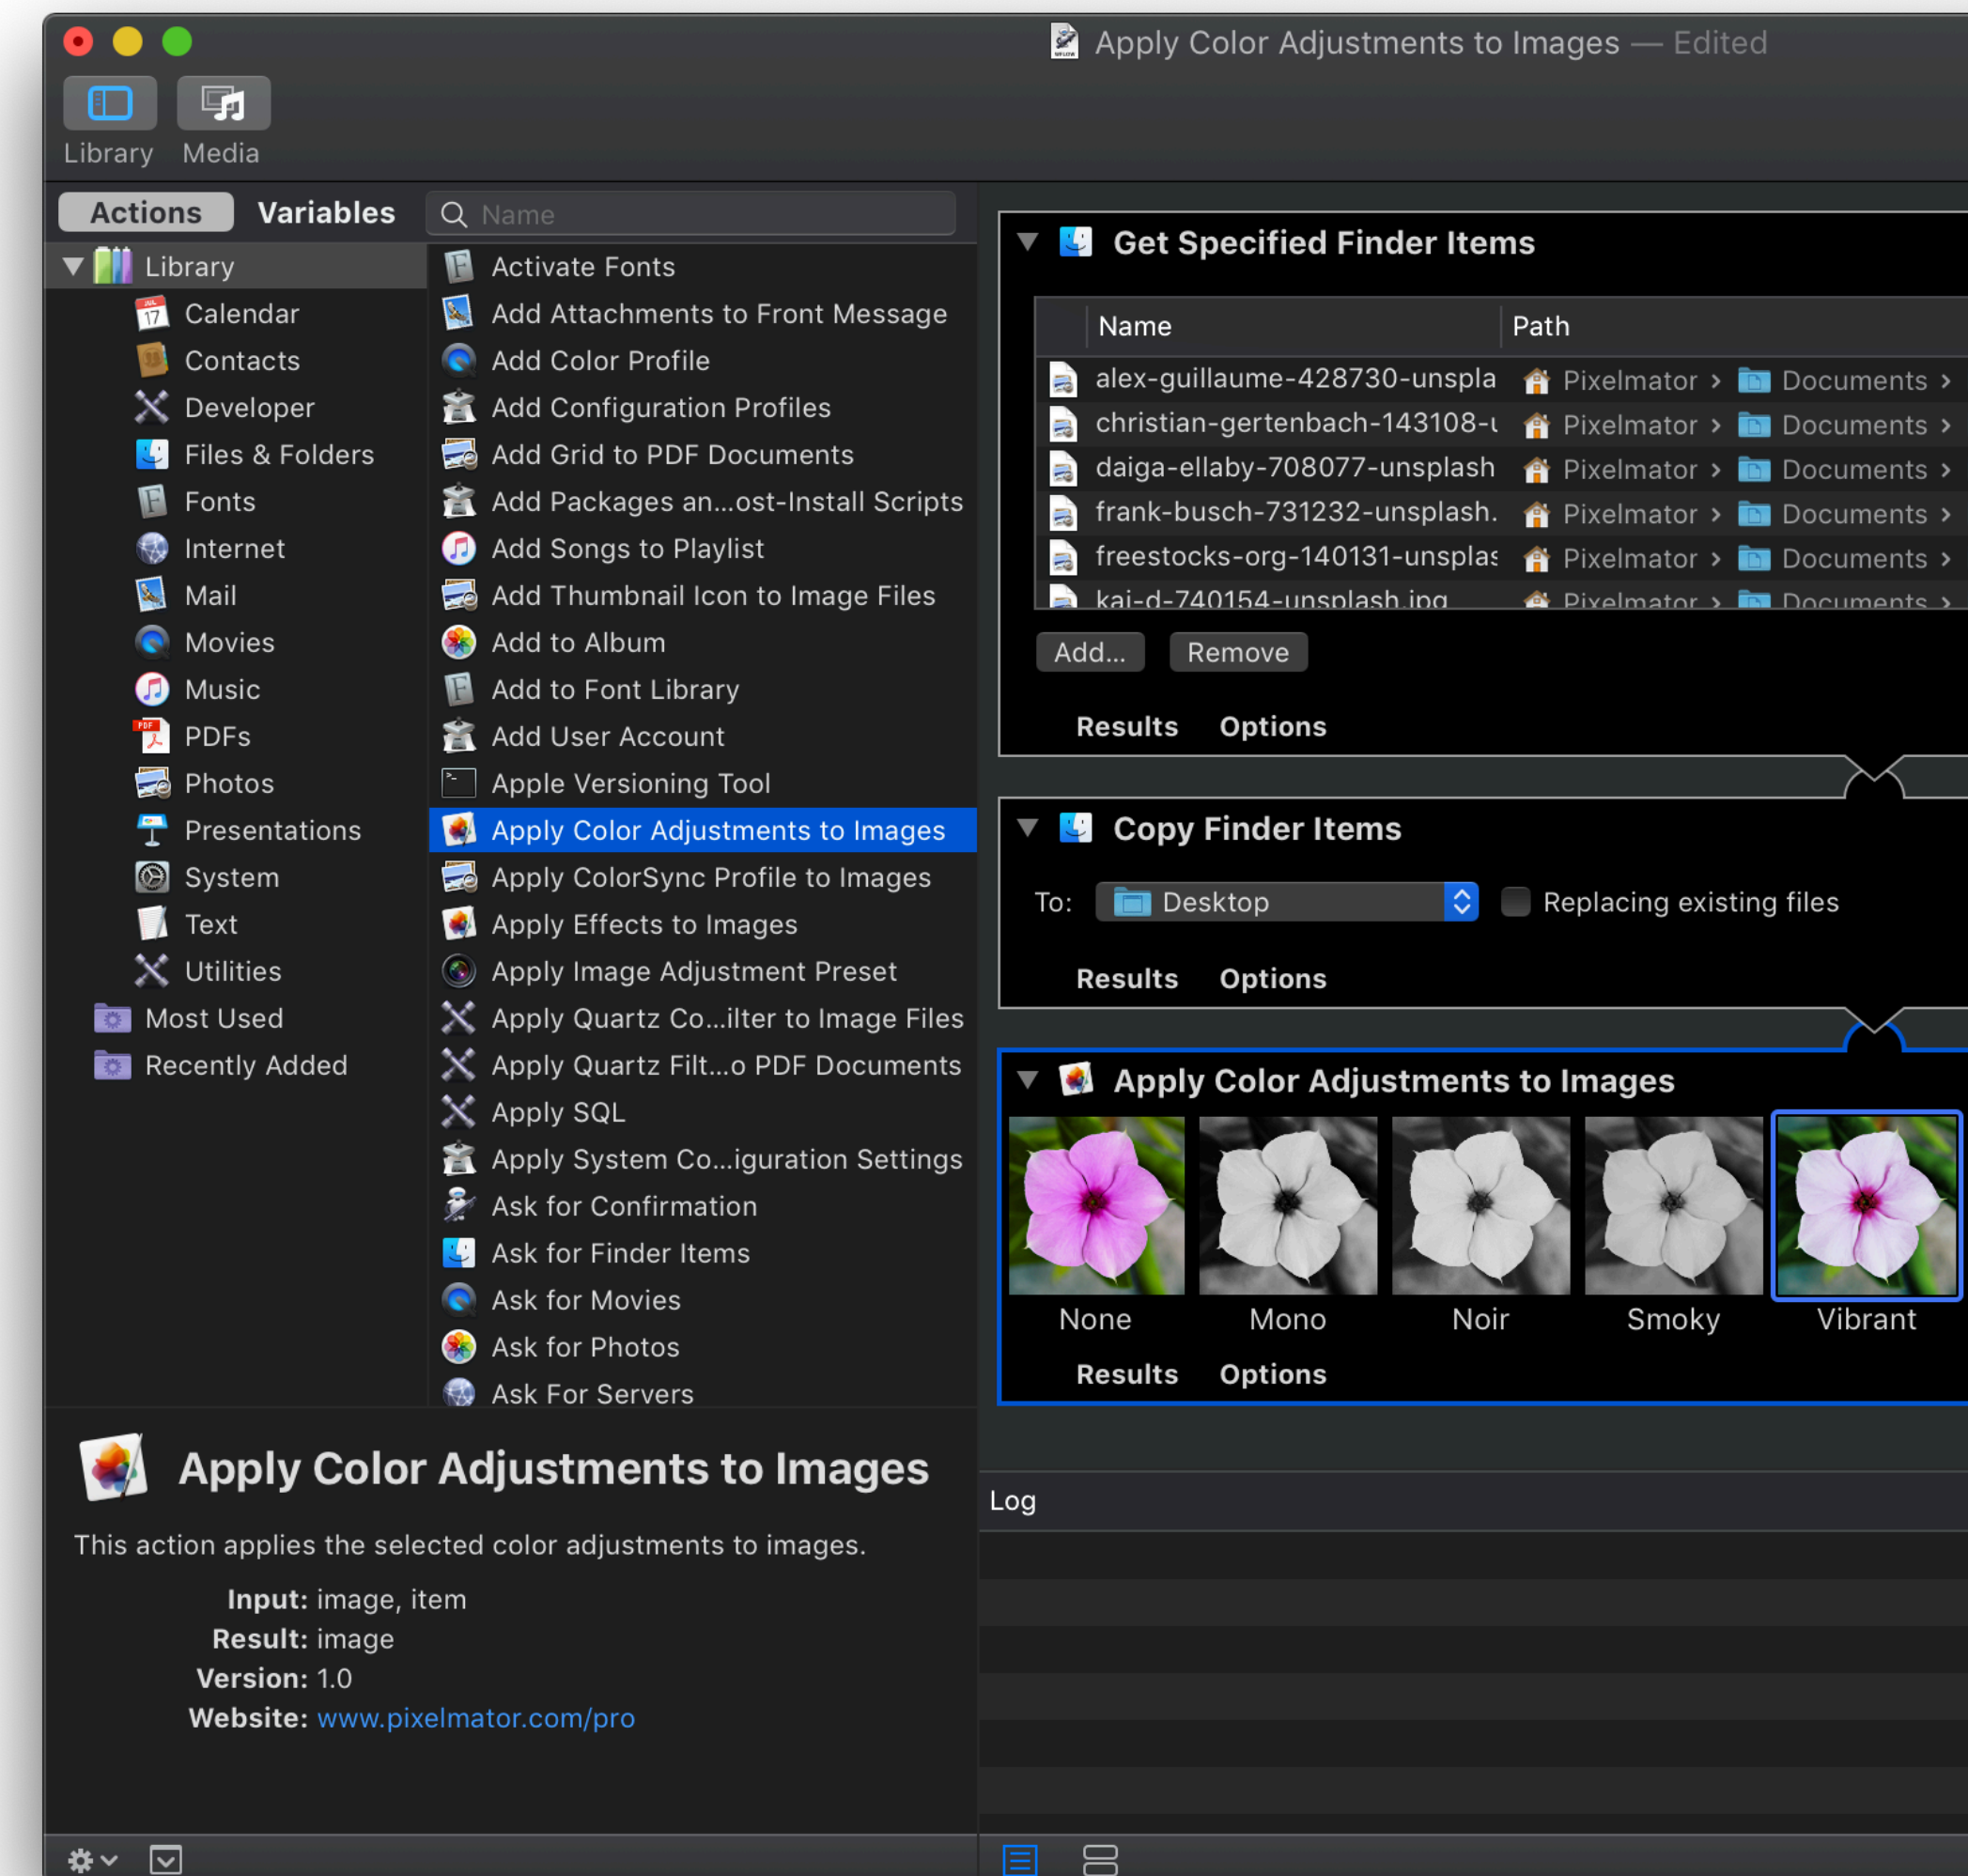

Apply a series of color adjustments to many images at once.

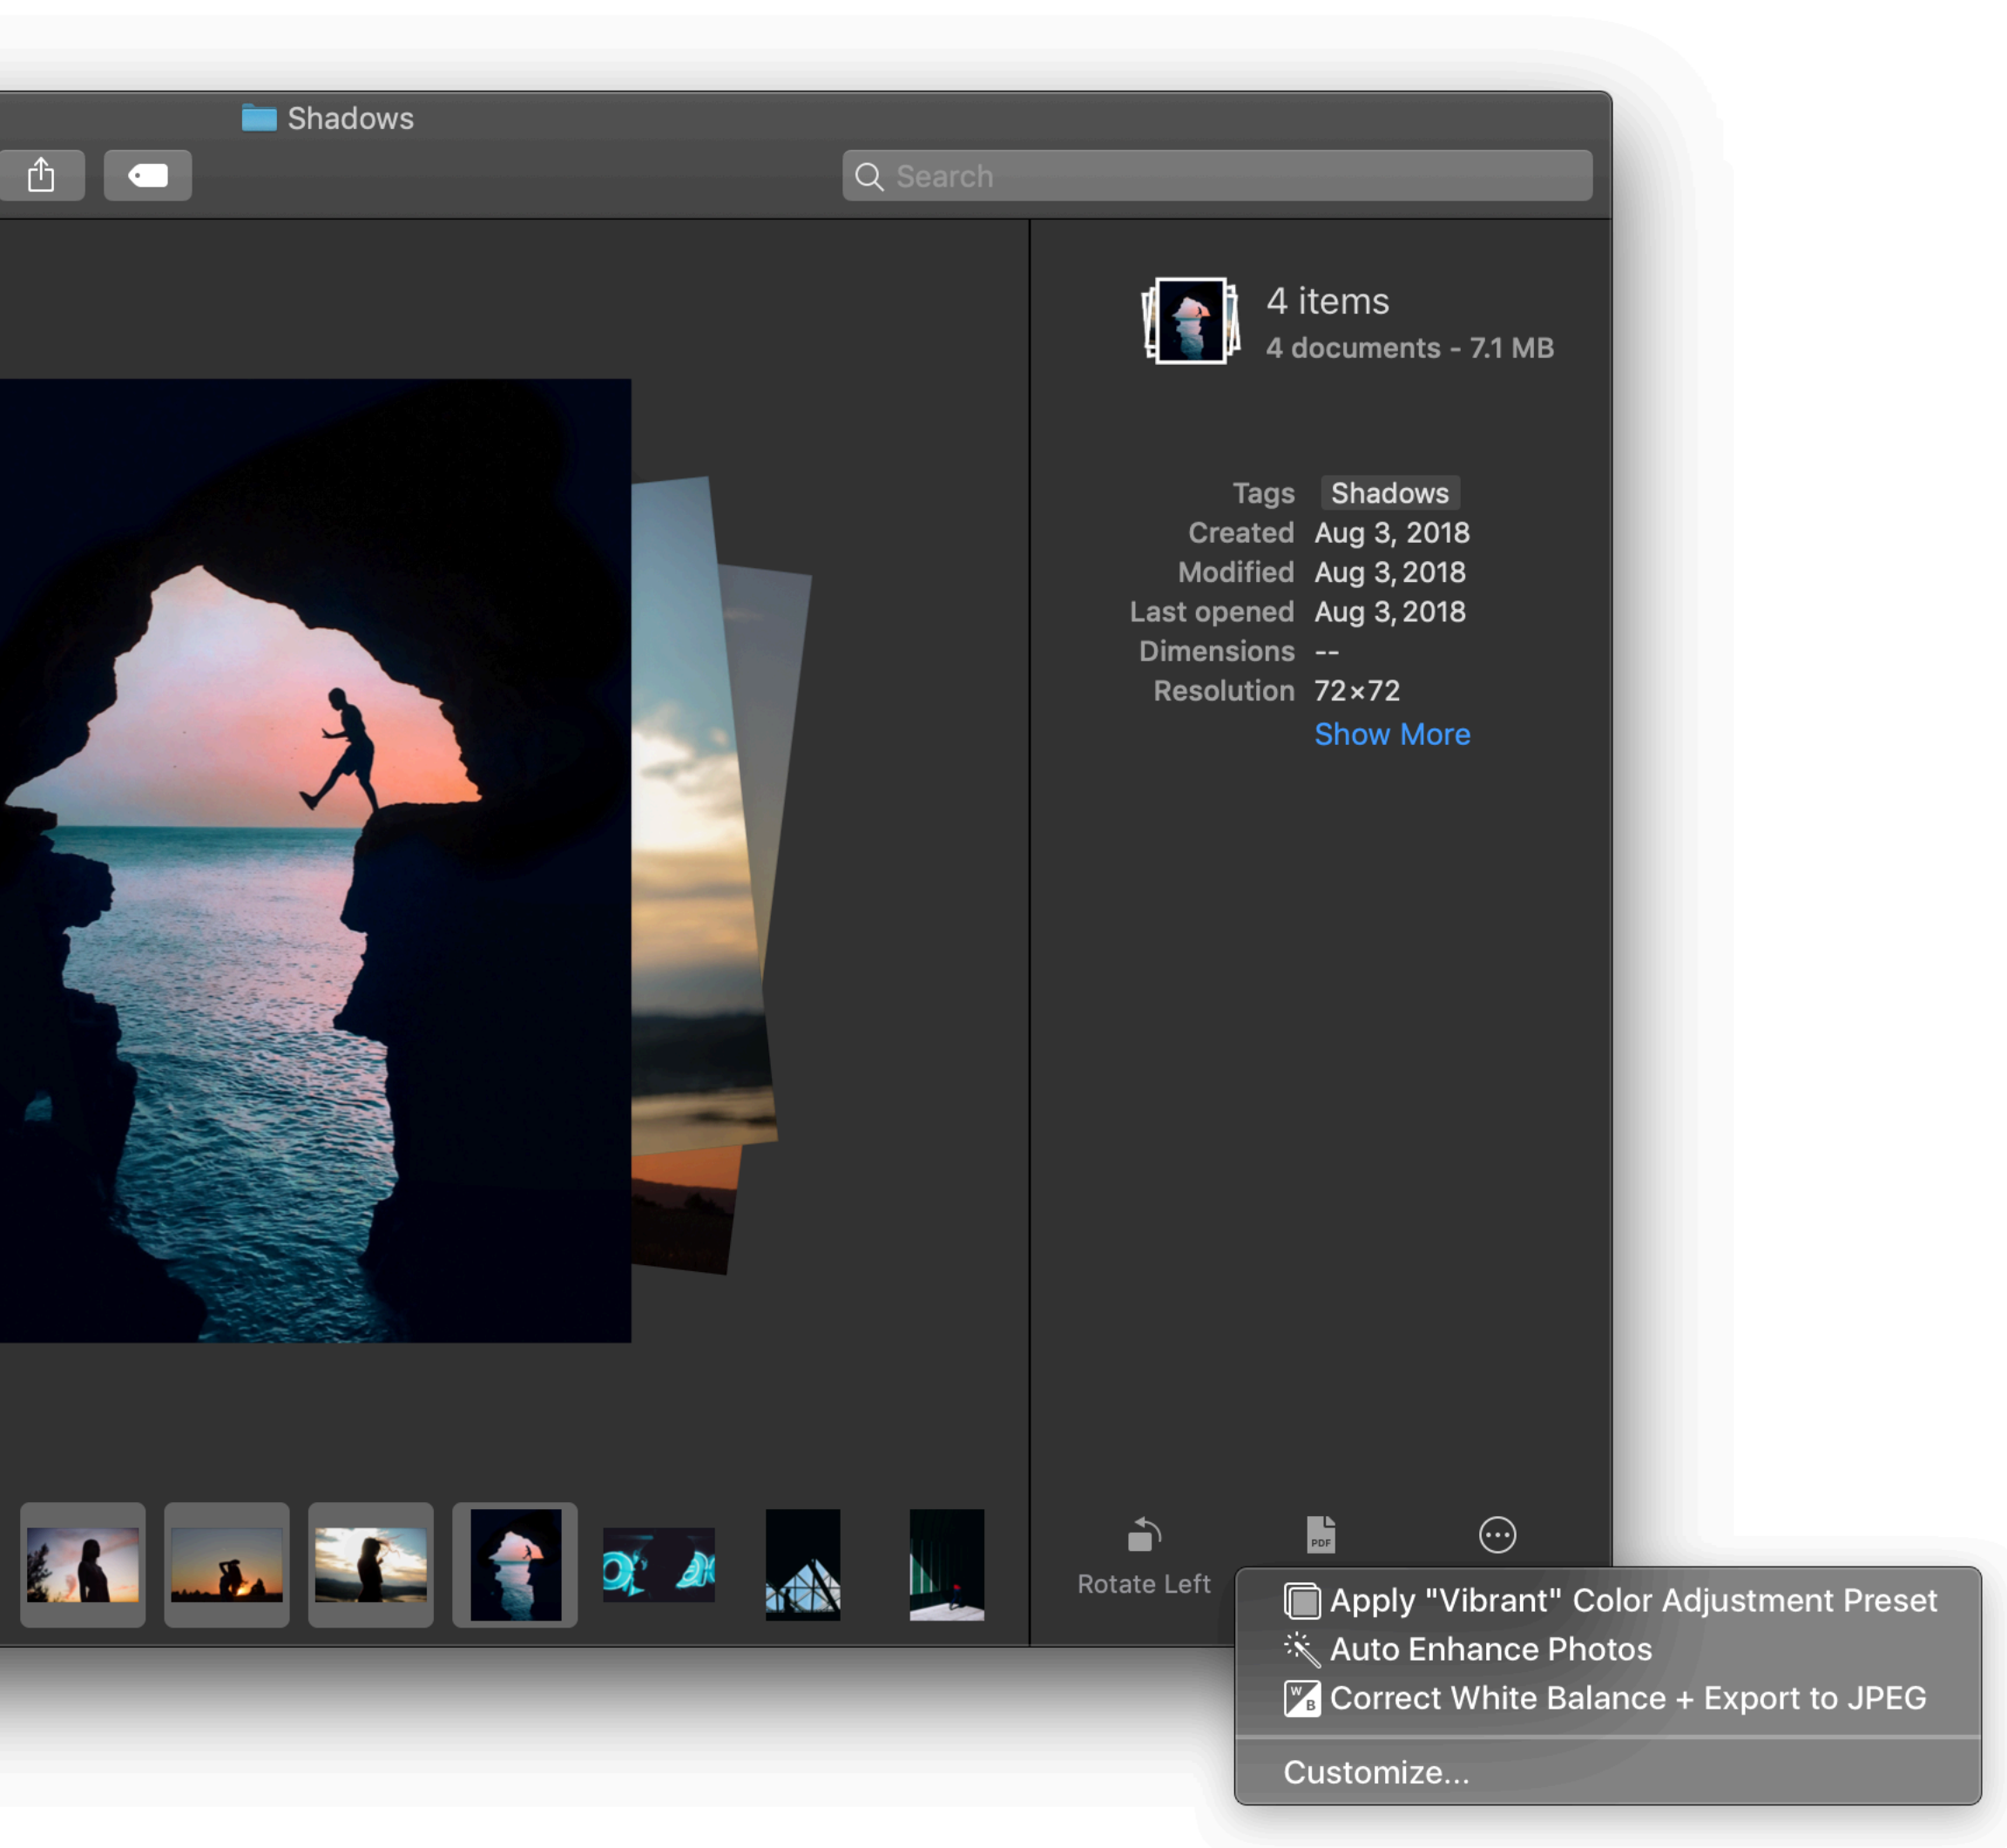

Apply Effects to Images

Apply a series of effects to multiple images.

Change Type of Images

Convert images from one file type to another.

Quick Actions

Quick Actions let you edit images right in the Finder using Pixelmator Pro. Thanks to five new Automator actions — Auto Enhance Image, Auto White Balance Images, Apply Color Adjustments, Apply Effects, and Change Type of Image — you can now use Pixelmator Pro to automatically enhance photos or make a series of advanced edits without ever opening the app.

Edit images without opening Pixelmator Pro

Quick Actions let you edit images in the Finder without ever opening Pixelmator Pro.

Create your own Quick Actions

With five Pixelmator Pro actions and many others in Automator, you can create all kinds of powerful, automated image editing workflows.
